Summary

Final-year Computer Science and Engineering student and Backend AI Engineer Intern at FlyRank AI, building RAG answer flows, structured-output and tool-calling pipelines, REST APIs, and full-stack apps with Python, FastAPI, and Node.js. 400+ competitive-programming problems solved.

Experience

FlyRank AI — Backend AI Engineer Intern

Jun 2026 – Present

Remote • part-time

- Design API contracts and retrieval-backed answer flows for AI product features, owning correctness and failure handling.
- Build structured-output and tool-calling workflows over LLM APIs, with schema validation and deterministic parsing of model responses.
- Implement RAG components (ingestion, chunking, embedding, retrieval) behind async FastAPI services.
- Write evaluation harnesses that score answer quality and catch regressions across prompt and retrieval changes; review pull requests and design docs with a distributed team.

Projects

Digital Knowledge Platform — digital library & knowledge management

Live | [GitHub](#)

Node.js, Python, Supabase (PostgreSQL), REST APIs, Microservices

- Built a role-based platform for creating, organizing, and searching academic resources: document repository, circulation/loan system, and student project showcase.
- Designed a Node.js REST API plus a standalone Python microservice for automated metadata extraction from uploaded documents.
- Implemented authentication, authorization, and role-based access control on Supabase/PostgreSQL for multiple user types.

GrocyGenie — AI grocery-prediction model

Demo | [GitHub](#)

Python, TensorFlow, pandas, NumPy, Hugging Face, Google Colab

- Developed an ML model that predicts grocery-depletion dates from personalized consumption patterns across multiple item categories.
- Trained and evaluated the model in Google Colab and deployed it as a Hugging Face Space with an inference API for the GrocyGenie mobile app.

FamNest — family finance & organizing app

Demo | [GitHub](#)

Flutter, Dart, FastAPI, MongoDB Atlas, Cloudinary

- Built an Android app for expense tracking, event management, and document storage across multi-user households.
- Designed FastAPI REST endpoints, optimized MongoDB Atlas queries, and integrated Cloudinary-backed media storage with organized, searchable files.

Education

University of Dhaka — B.Sc. in Computer Science and Engineering

Expected Dec 2026

Dhaka, Bangladesh

Relevant coursework: Data Structures, Algorithm Analysis, Object-Oriented Programming, Database Management, Operating Systems, Computer Networks, Software Engineering, Machine Learning, Artificial Intelligence.

Skills

Languages: Python, JavaScript, TypeScript, Java, C, C++, Dart, SQL

Backend & AI: FastAPI, Node.js, Express, REST APIs, RAG, LLM APIs, tool calling, TensorFlow, Hugging Face

Frontend & Mobile: React, Flutter, JavaFX, HTML, CSS, Tailwind CSS

Data & Infrastructure: PostgreSQL, Supabase, MongoDB, MySQL, Docker, Git, GitHub Actions, Linux

Practices: API design, evaluation harnesses, code review, unit testing, CI/CD

Achievements & Certifications

- **Competitive programming:** 400+ problems solved on CodeChef (rating 1426, 2-star); Silver badges in Problem Solving and DSA on HackerRank.
- **Certifications:** Learn Python Pro, CodeChef (2023) | SQL (Basic), HackerRank (2025).
- **Languages:** Bangla (native), English (professional working proficiency).
